Fall/2025-2026

Introduction:

Project Overview The retail industry has seen a massive paradigm shift from physical brick-and-mortar stores to digital platforms, making E-commerce an essential component of the global economy. As user expectations for digital experiences rise, the frontend interface of a website has become the critical determinant of customer engagement and retention.

This project focuses on the development of "**Style Hub**," a modern, web-based fashion retailer. The application is built exclusively using core frontend technologies: **HTML5** for structure, **CSS3** for presentation, and **Vanilla JavaScript** for logic and interactivity. Unlike traditional static websites, Style Hub utilizes client-side scripting to simulate a dynamic shopping environment, bridging the gap between static design and full-stack functionality.

Scope and Purpose The primary purpose of this project is to demonstrate advanced proficiency in Frontend Engineering. By eschewing third-party frameworks and backend databases, the project highlights the capabilities of the native web stack. The application simulates the complete user journey, including product discovery, category filtering, cart management, and a simulated checkout process, all tailored to provide a seamless User Experience (UX).

Problem Statement:

While the E-commerce sector is saturated with platforms, many existing implementations suffer from fundamental design and usability flaws that degrade the user experience. This project addresses the following specific issues prevalent in web development:

- **Lack of Responsiveness:** A significant portion of legacy E-commerce sites are not optimized for the diverse range of devices used today (smartphones, tablets, and wide-screen desktops). This leads to broken layouts and frustrated users.
- **Static User Interaction:** Many basic web implementations feel "static" or "dead," requiring full page reloads for minor actions. This friction disrupts the shopping flow and leads to higher bounce rates.
- **Visual Clutter and Poor Hierarchy:** Ineffective use of whitespace and typography often results in cognitive overload, making it difficult for users to navigate catalogues or identify call-to-action elements.

- **Inconsistent Data Validation:** Poorly implemented frontend validation often allows users to submit incomplete or incorrect forms, leading to errors in the simulated transaction process.

Style Hub solves these problems by adopting a "Mobile-First" design philosophy and implementing robust JavaScript logic to provide immediate visual feedback, ensuring a fluid and intuitive interface.

Objectives:

The objective of this project is to design and develop a responsive, interactive, and semantically correct frontend application. The specific academic and technical objectives are:

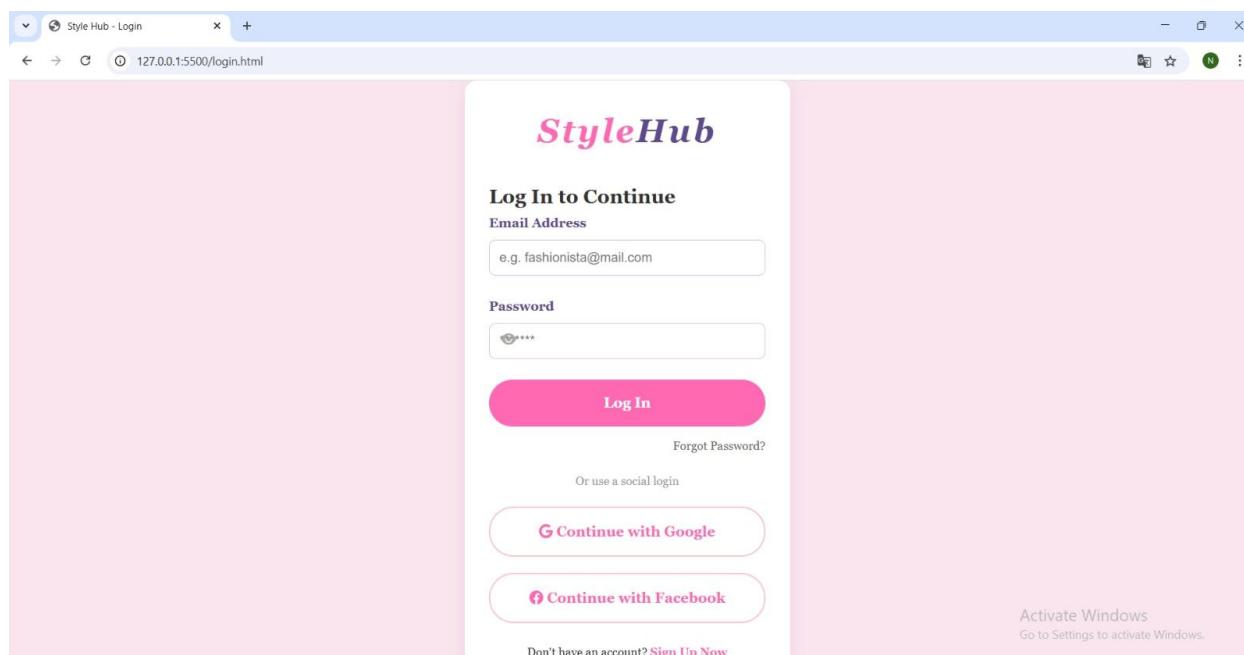

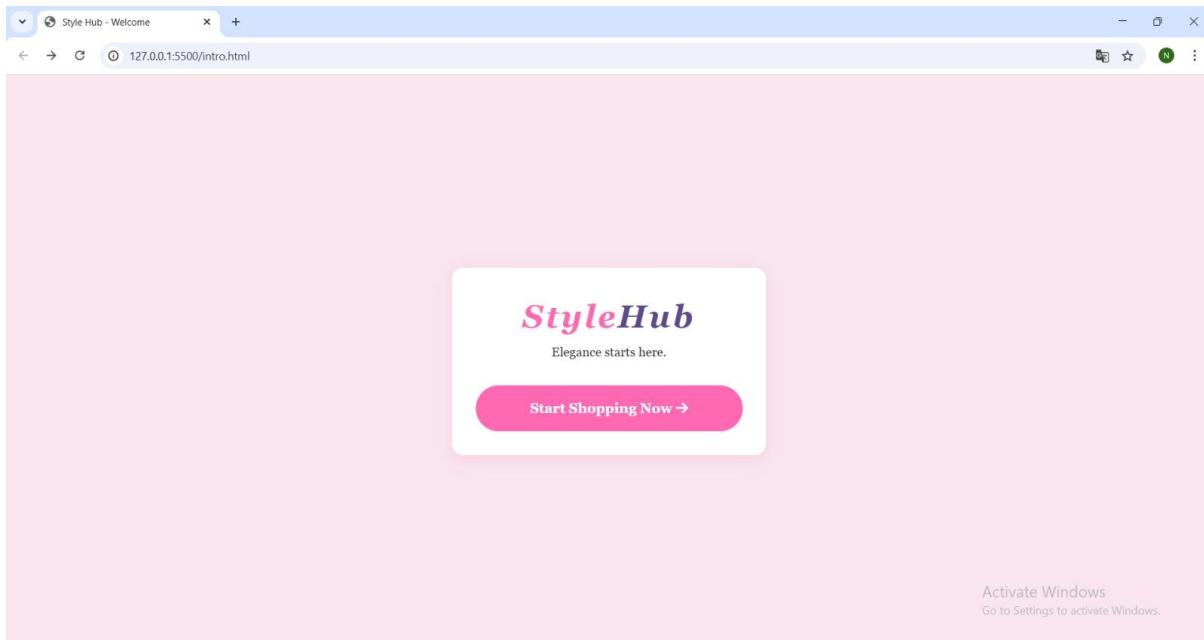

General Objectives

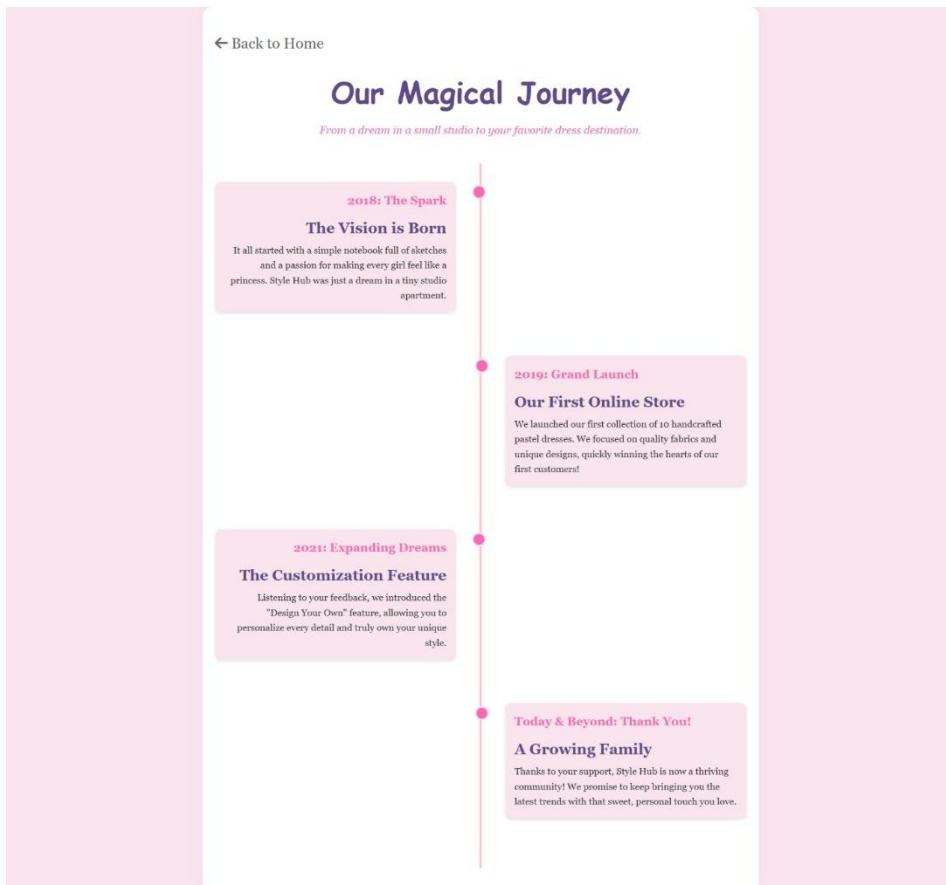

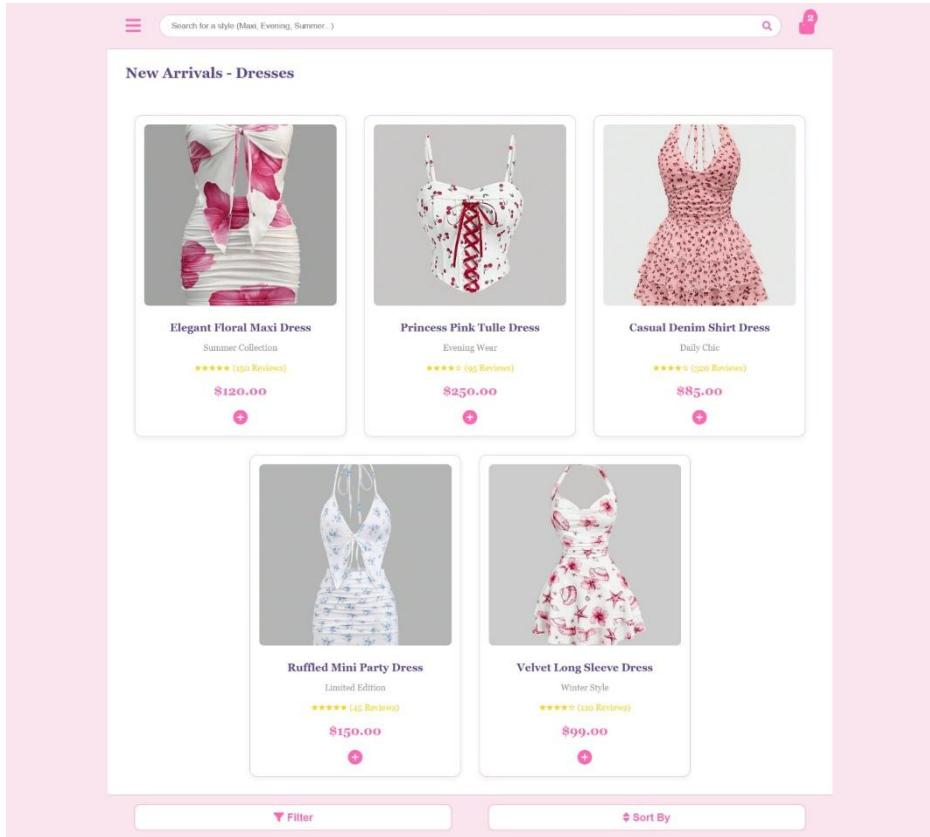

- To create a professional brand identity and visually engaging user interface that rivals commercial fashion outlets.
- To simulate the logical flow of an E-commerce transaction—from browsing to checkout—entirely within the client-side environment.
- To enhance user retention through optimized performance and intuitive navigation structures.

Technical Objectives

- **Responsive Layout Implementation:** To utilize **CSS Flexbox** and **CSS Grid** alongside Media Queries to ensure the application renders perfectly across all screen resolutions (Mobile, Tablet, Desktop).
- **DOM Manipulation & Interactivity:** To employ **JavaScript** for dynamic content rendering, enabling features such as adding/removing items from the cart, updating price totals in real-time, and filtering product categories without page reloads.
- **Data Persistence Simulation:** To utilize **HTML5 Web Storage (Session/Local Storage)** to maintain cart state across page refreshes, simulating a persistent user session.
- **Input Validation:** To implement strict client-side validation using **Regular Expressions (Regex)** for the "Contact Us" and "Checkout" forms, ensuring data integrity before simulated submission.
- **Semantic Development:** To strictly adhere to W3C standards by using semantic HTML tags, ensuring the code is clean, maintainable, and accessible.

Website Screen Shots

The screenshot shows a web browser window with the URL 127.0.0.1:5500/profile.html. The page has a pink header and footer. A white card in the center displays a placeholder profile picture, the name Jane Doe, and the email jane.doe@example.com. Below this, account details are listed: Username: janedoe123, Phone: +1 234 567 890, Shipping Address: 123 Fashion St, New York, NY, and Preferred Styles: Maxi Dresses, Evening Wear, Casual Chic. Buttons for 'Edit Profile' and 'View Orders' are at the bottom. In the top right corner of the page area, there is a watermark: 'Activate Windows Go to Settings to activate Windows.'

The screenshot shows a web browser window with the URL 127.0.0.1:5500/contact.html. The page has a pink header and footer. A white card in the center contains a message: 'We'd love to hear from you! Whether you have questions about our collection, need support, or just want to give feedback, we're here to help.' Below this, 'Contact Information' includes address (123 Fashion St, New York, NY), phone (+1 234 567 890), email (support@stylehub.com), and hours (Mon-Fri: 9am - 6pm). To the right, a 'Send Us a Message' form has fields for 'Your Name', 'Your Email', 'Subject', and 'Your Message'. A 'Send Message' button is at the bottom. In the top right corner of the page area, there is a watermark: 'Activate Windows Go to Settings to activate Windows.' At the bottom right, a copyright notice reads: '© 2025 Style Hub'.
